PROFESSIONAL SUMMARY

Motivated Computer Engineering student with a 9.83 CGPA, specializing in full-stack development and applied AI. Proficient in building intelligent systems using LangChain, RAG pipelines, and AI agent frameworks. Experienced with the MERN stack, workflow automation via n8n, and backend services with Firebase. Passionate about solving real-world problems through scalable, AI-powered software solutions.

TECHNICAL SKILLS

Languages: C, C++, JavaScript, Python

Web Development: MERN Stack (MongoDB, Express.js, React, Node.js), HTML, CSS

AI & Machine Learning: AI Agent Development, LangChain, Retrieval-Augmented Generation (RAG), Ollama

Backend & Cloud: Firebase

Automation: n8n Workflow Automation

PROJECTS

Local AI Agent with RAG — File Interaction System

LangChain | RAG | Ollama | Python

- Engineered a Retrieval-Augmented Generation (RAG) pipeline using LangChain, enabling a locally-hosted AI agent to semantically search and extract information from multiple file types.
- Integrated Ollama to run large language models entirely on local infrastructure, eliminating external API dependencies and ensuring full data privacy.
- Implemented a vector-based document indexing system that reduced query response time and enabled context-aware, accurate responses from unstructured file content.
- Designed a modular architecture supporting extensible file ingestion, making the system scalable for diverse enterprise document workflows.

EDUCATION

Bachelor of Engineering — Computer Engineering

Sahyadri College of Engineering and Management, Adyar, Mangalore | **CGPA: 9.83 / 10.00** | **Semester 4**

PROBLEM SOLVING

- Actively practice Data Structures and Algorithms on LeetCode and GeeksforGeeks, consistently solving problems across arrays, graphs, dynamic programming, and recursion.
- Focused on optimizing algorithmic complexity and writing clean, efficient code to strengthen core computer science fundamentals for technical interviews.
